We Are
Decorating
The World

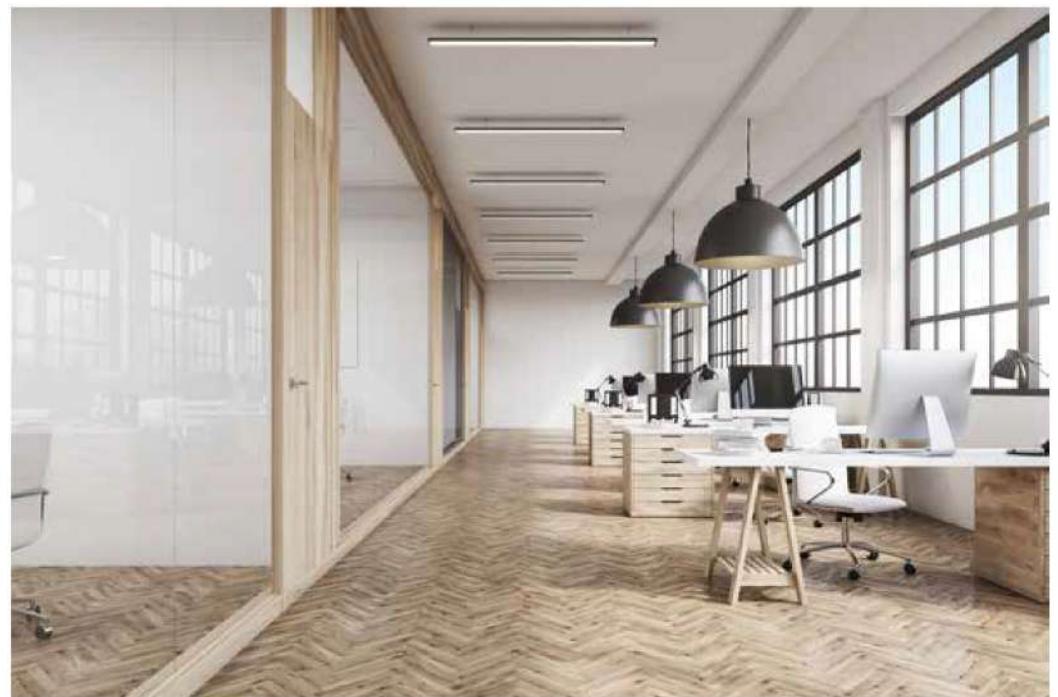

Turnkey Project / Contract Furniture

The Project Management team performs a crucial role in the successful completion of each project. They plan and design the entire process from the draft stages of the concept design through construction to installation and on-going maintenance. They coordinate and oversee every element of the project.

Interior Design

Our interior Design team listens to your requirements, the idea you have about your space and visualize your ideas based on their expertise and observations. They give you clear image of the space, would look, after the project is done. Since we have sub teams in our interior design department with different expertise, so the experts in that major will be appointed to you.

Fit-out / FF&E Partner

We can review and complete project specifications developed by the Interior Designer and outline FF&E and OS&E Brand Standards. After that we can estimate budget for the FF&E and OS&E packages, based on requirements & develop schedule for acquisition and manufacturing, as well as logistics, storage and installation.

Conceptual Design & Application

Commercial interior designers are trained to prioritize functionality and safety without sacrificing style or aesthetics. The designer transforms the physical structure into a living and breathing space in the decorating process. Our interior designers know how to plan the space without surrendering design.

Loose & Fixed Furniture Production

Maison Ciel is a reliable solution partner not only for your loose furniture needs but also fixed furniture. While our fixed furniture solutions reflect your corporate identity; high quality and stylish loose furnitures provide ergonomics and comfort for your employees and guests.

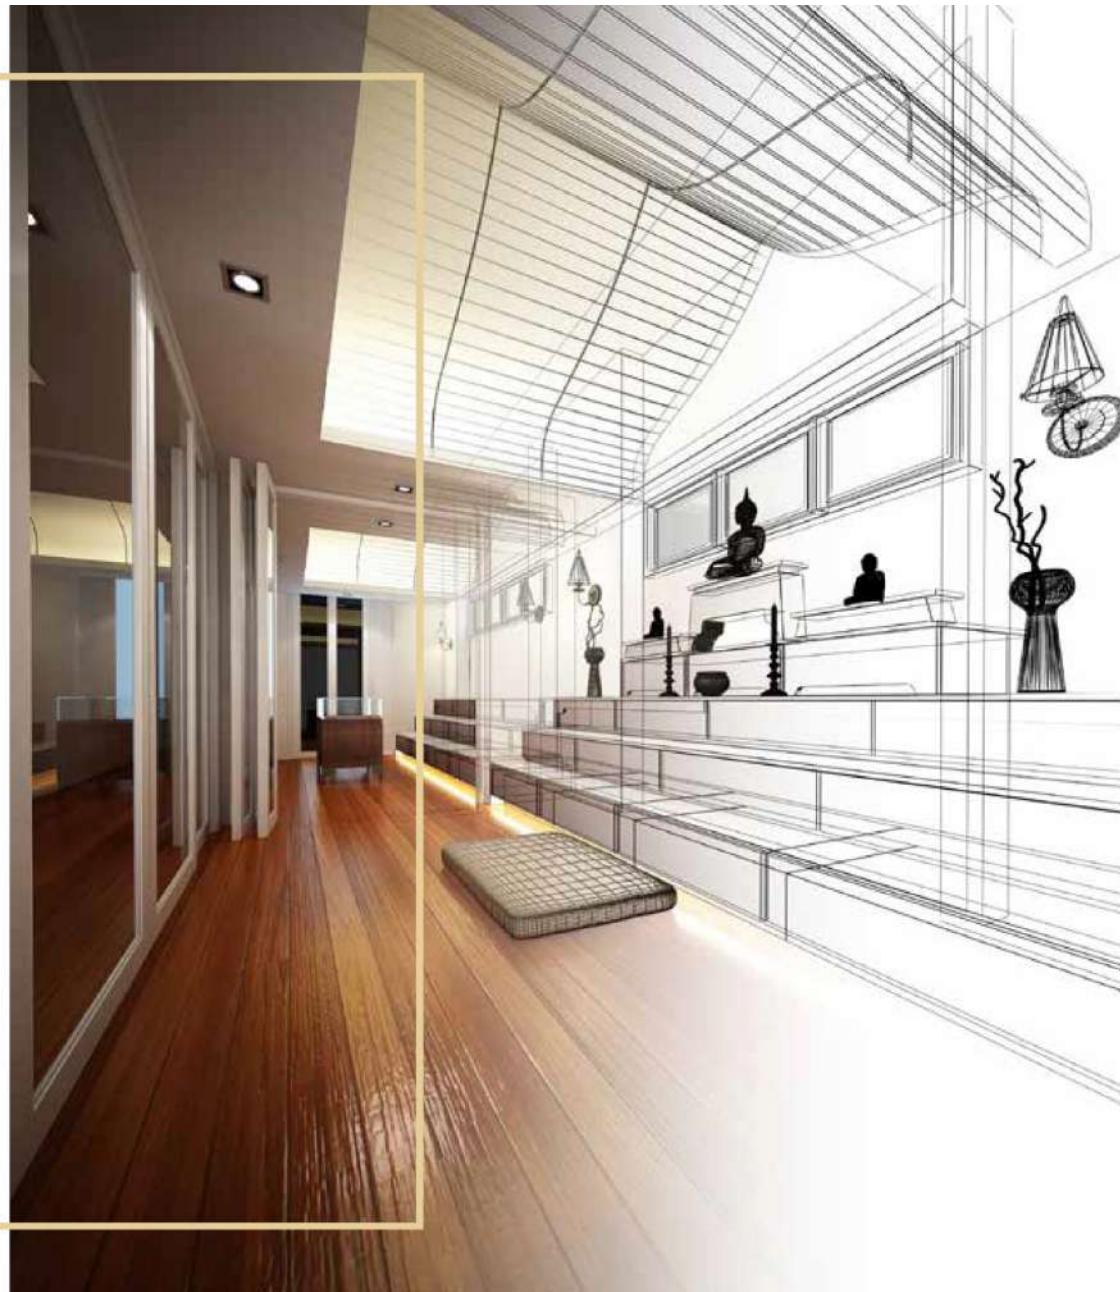

Standard & Custom Made Production

Maison Ciel offers you wide variety of standard furniture in selected material and colors. Biggest advantage of preferring standard furniture is short lead times. It can be as fast as 3 weeks. Maison Ciel is also able to custom make your furniture based on the space you willing to furnish.

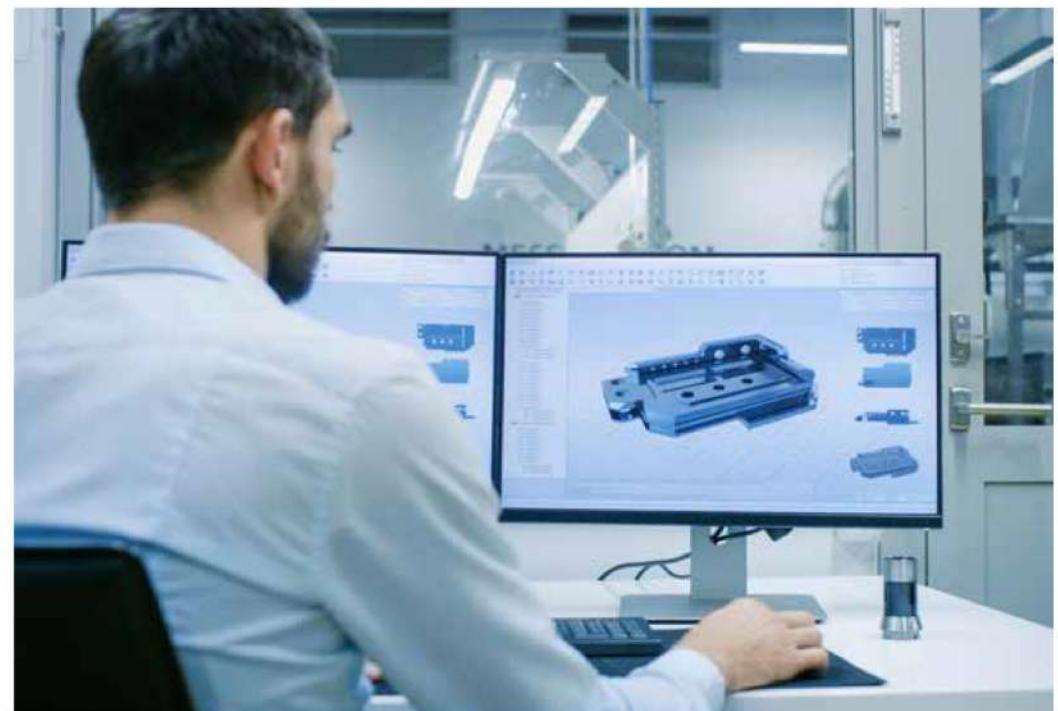

Interior Architecture

Our interior designers define the project's scope of work, draw schematics and blueprints, select the right materials, and oversee budgeting and scheduling, along with other important duties. Once the construction phase is complete, the designer then transforms the physical structure into a living and breathing space in the decorating process.

2D / 3D Drawing

2D Floor layout plans let us allocate the spaces and make sure the furniture is going to fit and it will be supervised with our interior design team. With 3D Rendering we make it possible for our client to see how their space would look after productions. It helps them avoid costly demolition & rebuilding operations before construction and renovation begins.

Suppliers and Subcontractors

In turnkey project concept we are not able to manufacture every piece required for the project so we have created a wide range of suppliers that support us with our projects. This solution supports our client to avoid wasting their time and have only one accountable party for their project.

Warehouse

Maison Ciel collects all the products in one warehouse where the products will be categorized as planned by the interior designers.

Storage matters at this point. This service includes making export boxing and using wooden cases for fragile items, executing shipping schedules, booking of containers, export custom clearance, storage and final delivery of all goods to the project area.
